

Testimonials

Here's what our clients say

“As a company that prides itself on its safety record, we are continually monitoring how we can improve the working conditions of our staff.”

“We have been delighted by Tensator’s response to our requirements and we are happy to be using them now as a preferred supplier.”

Graham Whitelocks, Health and Safety Director, Stagecoach

“We have invested heavily in safety measures onboard the trains and in stations, and Tensator has played a major part in our plans.”

“With thousands of passengers making journeys on a daily basis, it’s important that they’re able to purchase tickets both quickly and safely, and the Tensabarriers® have proven to be a cost effective solution for us.”

Dubai Metro, The Roads & Transport Authority (RTA)

“The safety of our employees is paramount and we strive to continually improve health and safety measures in our workshops. Using Tensator’s retractable technology helps us to clearly highlight hazardous areas to prevent potential accidents.”

Ian Tarran, Engineering Director, Arriva UK Bus

Increase Safety & Visibility in the Workplace

As the inventor of the world leading Tensabarrier® retractable queue barrier, the safest barrier on the market, Tensator understands the importance of a safe working environment.

Almost a quarter of all fatal accidents at work are caused by slips, trips and falls, with many incidents being entirely avoidable had simple, cost effective prevention technology been correctly installed.

Tensator works with businesses and organisations in a diverse range of industries, including transport, leisure and retail. Delivering global consultancy and customised product design services focusing on the elimination of unsafe working conditions, through the consideration of factors such as:

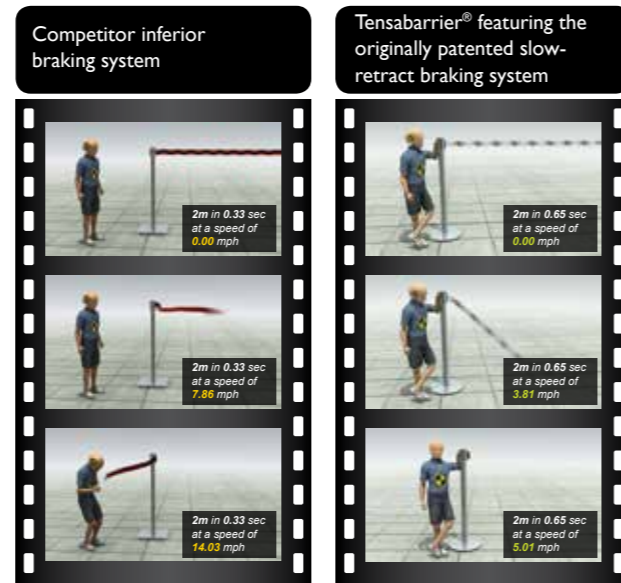

- Clearly defined routes
- Restricting access to dangerous areas
- Identification of potential hazards before they cause harm

Choose products with inherent safety features

Recent studies show that competitor barrier products without braking systems accelerate at a speed equivalent to 85mph – faster than a formula 1 car off of the starting line!

Unlike competitor products, Tensabarrier® posts have:

- An originally patented braking system that incorporates twin brake shoes. This slow retract technology allows the webbing to fall to the floor upon release and then slowly and safely retract back into the post – eliminating the risk of an accident and injury claims
- Anti-tamper tape ends for webbing belts, providing an additional safety feature and preventing accidental release of the webbing
- One of the best topple angles on the market, at over 30°, to help ensure a safe working environment

Be proactive, not reactive when it comes to avoiding costly accidents

Choose from a wide range of highly engineered, hard-wearing, functional and cost effective health and safety solutions to:

- Help create a safe working environment
- Assist in preventing potential accidents
- Save time and money on worker productivity and costly legal action

By using simple, highly visible retractable belt technology inherent in Tensabarrier® – one of the safest barriers on the market – you can stop a minor or major accident before it happens.

Versatility & adaptability for indoor and outdoor safety areas

Ensure employees, visitors and customers are protected from dangerous areas and hazards, indoors or outdoors, with versatile and easy to move free standing Tensabarrier® posts.

- Define people traffic routes in an instant
- Draw attention to dangerous areas
- Assist in preventing potential accidents
- Help create a safe working environment

HSE approved & compliant with working at height regulations

Improve visual safety protection around service pits at train and bus depots, vehicle inspection pits, garages and within loading bays in distribution centres.

Approved by the Health & Safety Executive (HSE) as a workable solution, Tensabarrier® pit protection posts are deemed fit for purpose, complying with working at height regulations.

Tensator provides a client consultancy service to ensure specified solutions meet health, safety and working environment requirements

- Flexible pit protection solutions
- Fulfil the HSE requirements and comply with the working at height regulations
- Clearly demarcate hazardous service pit areas
- Increase safety and visibility in your workplace with flexible highly visual protection barrier systems

Effective & flexible access restrictions with minimal footprint

Improve health and safety across your business with retractable webbing wall mounted Tensabarrier® units. Wall units are highly effective at cordoning off hazardous areas without taking up any floor space.

Ideal for closing off checkouts in supermarkets, restricting access to corridors during work or maintenance, closing park attractions, preventing access to elevators and escalators or closing warehouse aisles to non-authorized personnel when forklifts or dangerous machinery is in operation.

- Prevent access to dangerous areas
- Close off operation areas during periods of maintenance or cleaning
- Create a safe working environment
- Prevent an accident before it happens with highly visible, easy-to-use wall mounts
