

TENSATOR®
leading the customer journey

Access Control Portfolio

Automatic Gates

Tensator's Automatic Gate creates the perfect solution for directing the flow of customers and staff, maintaining an additional level of security within your premises.

Whilst many features are built in as standard, the Tensator Automatic Gate can be customised to meet your individual requirements with a range of additional options, creating a one-stop solution for your access control requirements.

Standard Features:

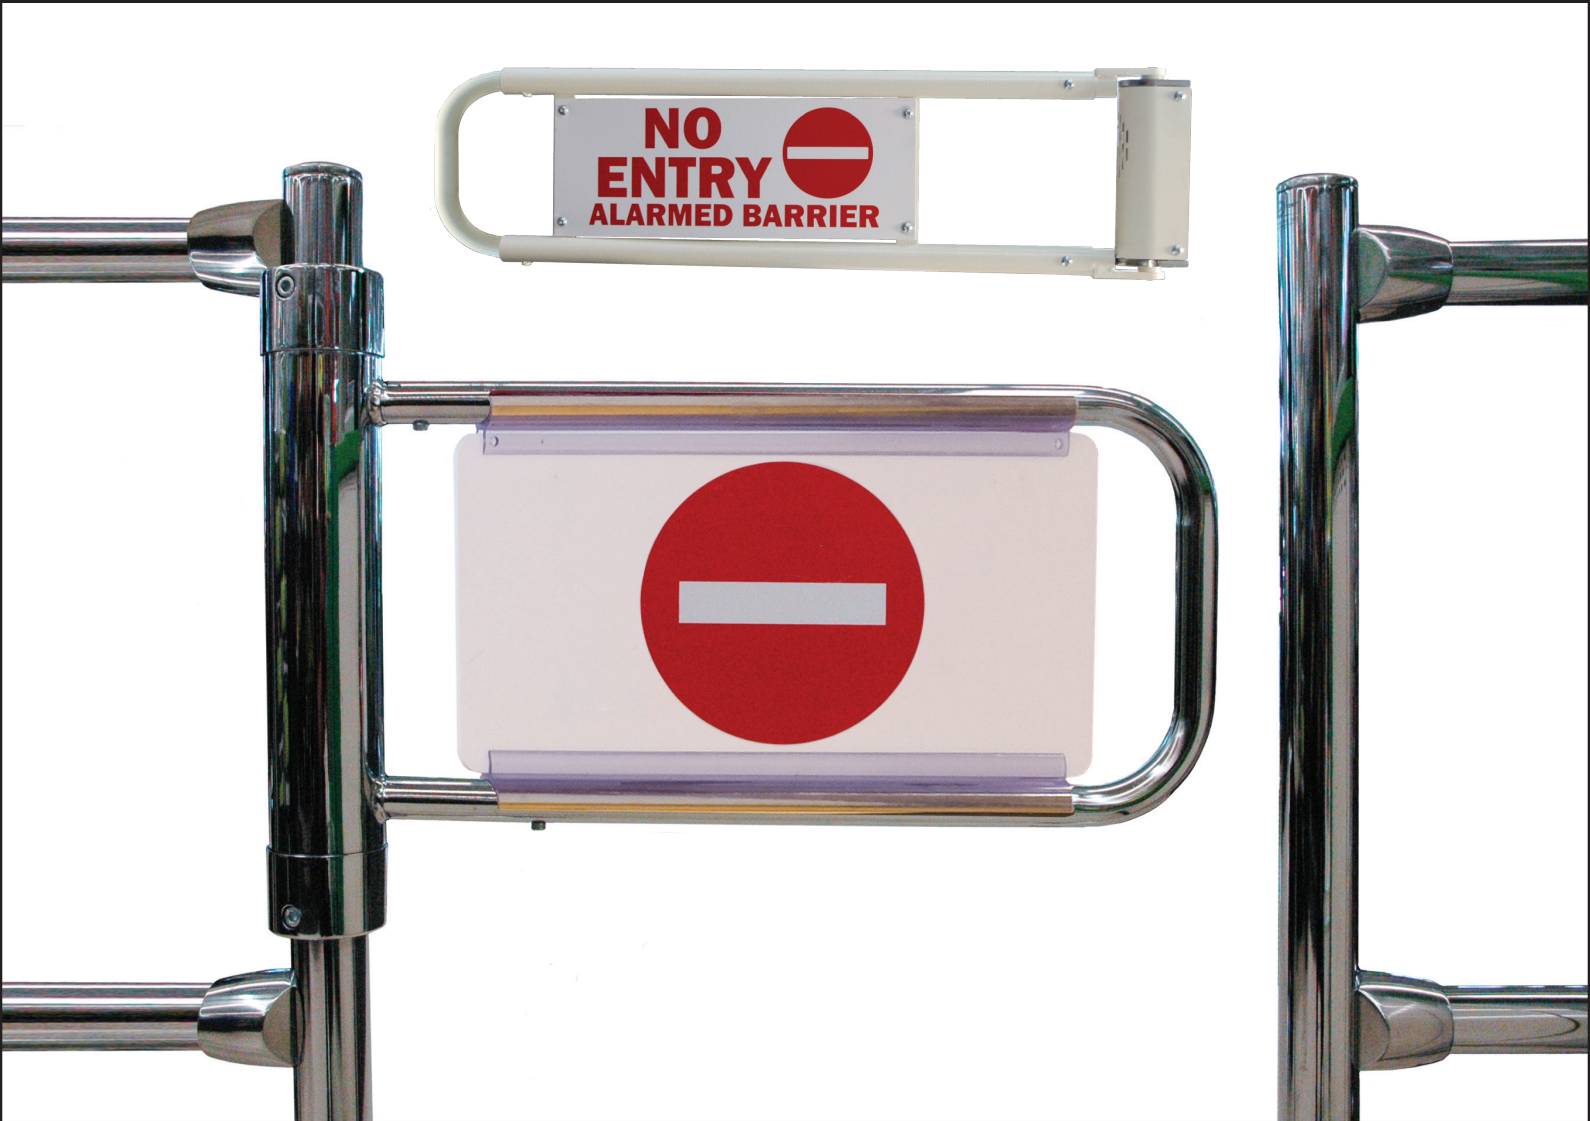

- Eco-friendly and energy efficient
- Sleek and elegant with 102mm body diameter in polished chrome
- 926mm gate arm complete with white infill panel and international Arrow/No Entry symbols
- 90 and 180 degree operation, left and right hand orientation
- Miniature radar approach sensor detects the movement of customers/ staff triggering the gate to open automatically
- Adjustable opening time delay of 0 – 20 seconds with the option of permanent open mode via a manual switch - useful for deliveries and floor cleaning
- Audible alarm to alert staff if the arm is pushed/pulled in either direction when closed. The alarm sounds for 5 seconds, after which the automatic resetting resumes normal operation
- Can be linked to a fire alarm system to drive the gate arms into the open position in the event of emergency, in the event of power failure the arms can be manually pushed into the open position
- If the arm becomes blocked during operation, the gate motor automatically adopts a sleep mode after 4 movement attempts. Normal operation will resume when the object has been removed

Optional Features:

- Stainless Steel, Satin Chrome and Coated RAL colours/finishes
- Full Depth Gate Arm with acrylic infill panel for enhanced security
- Ceiling mounted "motion and presence detection sensor" for enhanced detection in confined areas
- Ultrasonic Sensor – Rear body mounted sensor option offers additional safety, automatically stopping movement of the gate arm should a person be detected within the swing area
- Fully compatible for activation with card reader, proximity reader, radio frequency and keypad switch

Mechanical Gates

Tensator offers an economical range of reliable and practical Access Control Mechanical Gates, perfect for environments where maximum security solutions are not required.

Customers can choose from left or right handed Standard Mechanical Gates, Emergency Exit or Checkout Closure gates incorporating a manual break-out facility.

Features:

- Polished Chrome finish as standard for a consistent corporate look
- The 926mm gate arm length can be customised to meet specific requirements
- Gate arm features internationally recognised entry 'Arrow' and 'No Entry' symbol as standard
- Ideal for creating welcoming entrance and exit systems, defining walk ways or politely guiding personnel away from non-access areas
- The Standard Mechanical Gate is designed to open manually and return to a closed position under spring tension when pressure is removed
- The Emergency Exit Gate provides an ideal solution for guiding people through exit routes, as when firm pressure is applied, the gate arm remains static at 90 degrees until reset, to allow a manual break-out facility in the case of an emergency
- Wall mounted or attached to the side of the checkout, the Checkout Closure gate is ideal for preventing unauthorised access through restricted areas

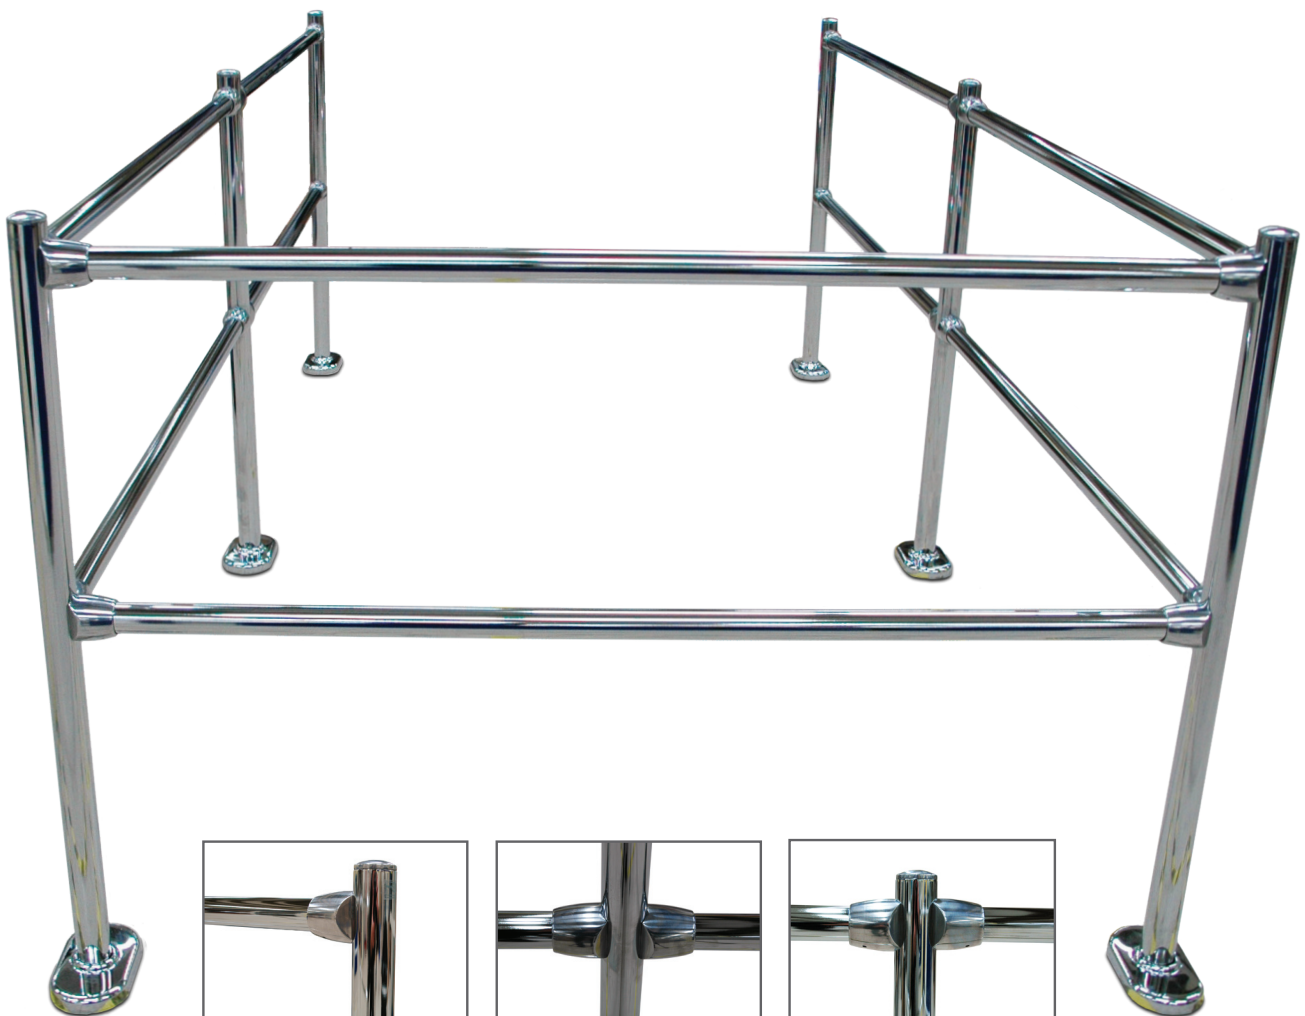

Fixed Rail System

'Leading the customer journey' is easy with Tensator's Access Control Fixed Rail Systems, helping you to design efficient queue layouts and create clear and effective entrance and exit points.

Tensator's Fixed Rail System is extremely versatile and can be used as a standalone rail or in conjunction with Tensator's Automatic and Mechanical Gates.

Features:

- A perfect solution for demarcating areas alongside entrance gates, cordoning off non-accessible areas, creating a fixed sleek single line queue barrier or creating an indoor trolley park to safely store trolleys when not in use
- A modular railing system which allows you to vary the number and lengths of rails and post types according to your design requirements
- Choice of 2 cross rail lengths (1.5m or 2.0m), 5 posts including End Post, Left Hand Corner Post, Right Hand Corner Post, Middle Post and Tee Post (post heights are 1068mm), and a choice of floor fixings, to ensure the correct solution for your environment
- The Fixed Rail System is available in Polished Chrome as standard but can be painted to match corporate branding

Tensator's Access Control portfolio is ideally suited for use in retail environments, airports, leisure centres and corporate offices. We can assist in the design and configuration of your entrance and exit points and optimise the space you have available in your environment.

Our Access Control products include a range of intelligent Automatic gates, Mechanical gates, a Checkout Closure gate and a sleek and sturdy Fixed Rail system. These can be used in conjunction with your existing installations or can be customised according to your requirements. Tensator's Automatic Gate is compatible with a variety of key pad/swipe card activation mechanisms, proximity and card reader entry and fire alarm systems.

Customer safety is paramount and we provide products that ensure standards are continually met. Our products are BSi and CE/FCC approved.

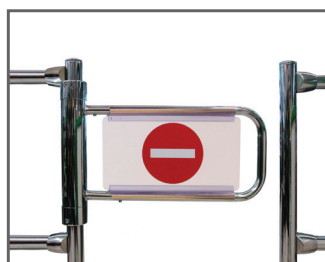

Our teams provide a full site survey, installation and maintenance service with a one year warranty on all products.

Tensator is the global provider of Queue Management products and solutions that literally 'Lead the Customer Journey'. Our product portfolio delivers an excellent solution to customer guidance and crowd control requirements. By introducing an efficient Tensator Queue Management solution we can guarantee the following benefits for your business and your customers:

- ➔ Minimised waiting times and reduced frustrations
- ➔ Increased throughput and increased sales & profitability
- ➔ Increased satisfaction levels and improved customer retention rates
- ➔ Improved productivity and operational efficiencies
- ➔ More informative and entertaining waiting times
